Introduction

To understand what makes books popular and well-liked, this analysis explores Goodreads data (1900–2020). We'll identify key features influencing success, examining authors, reviews, ratings, languages, publishing trends, and book length.

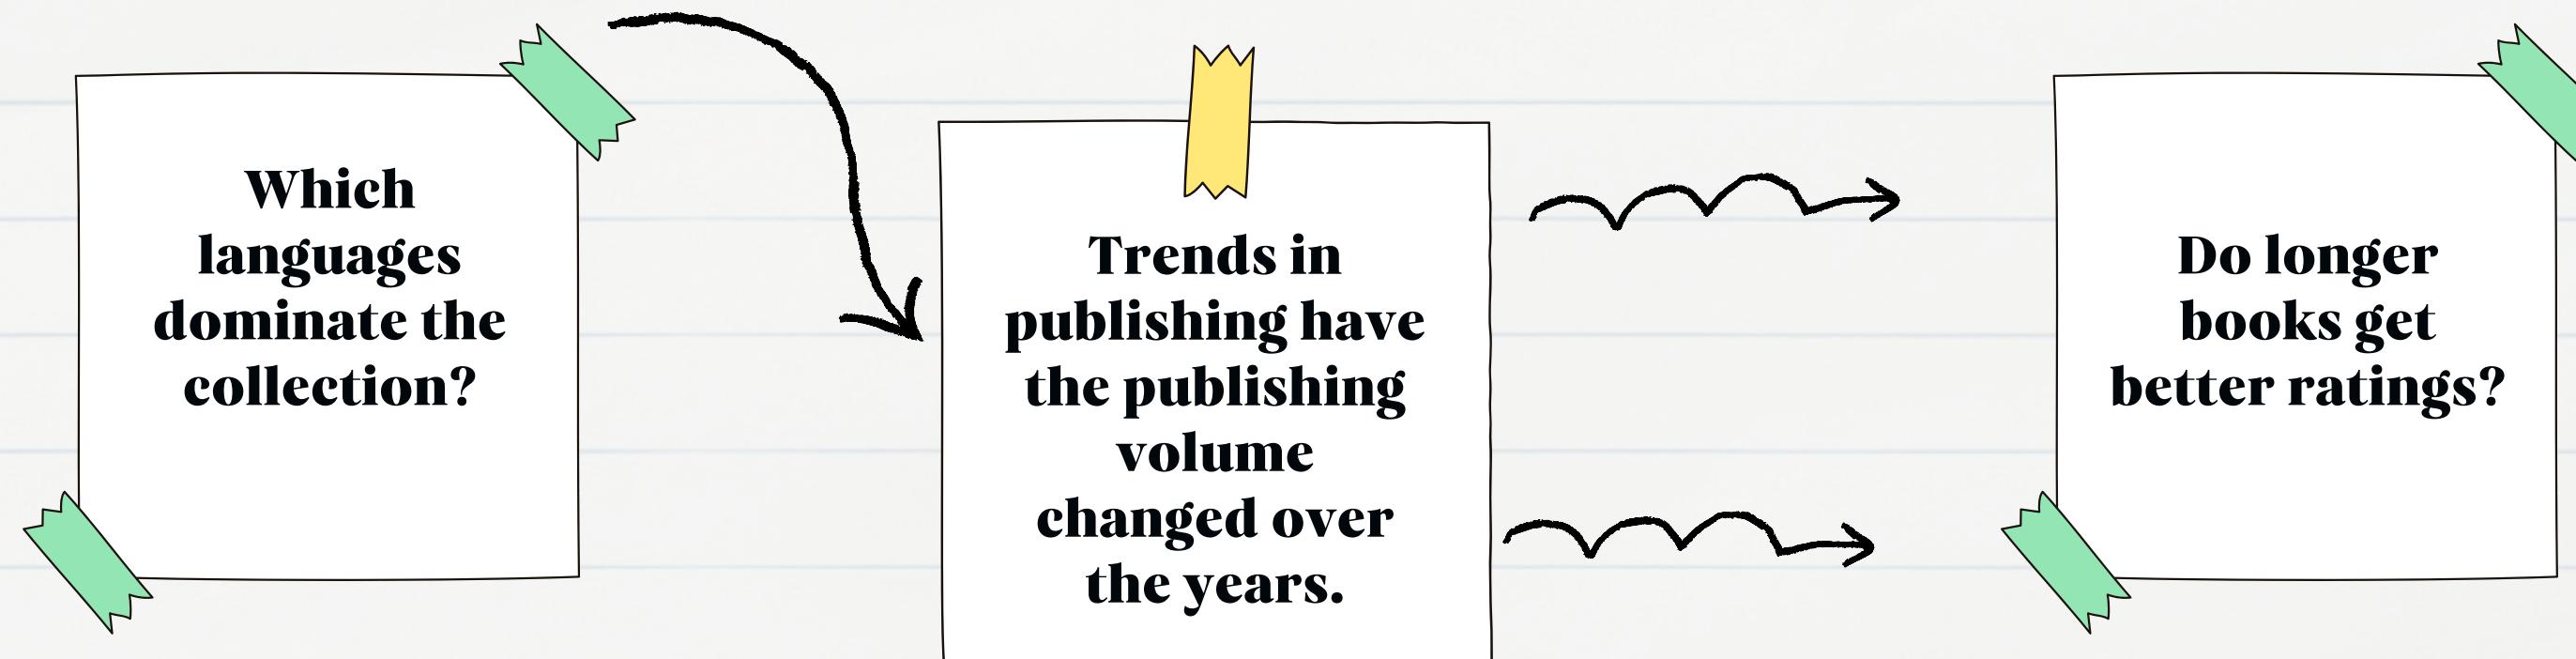

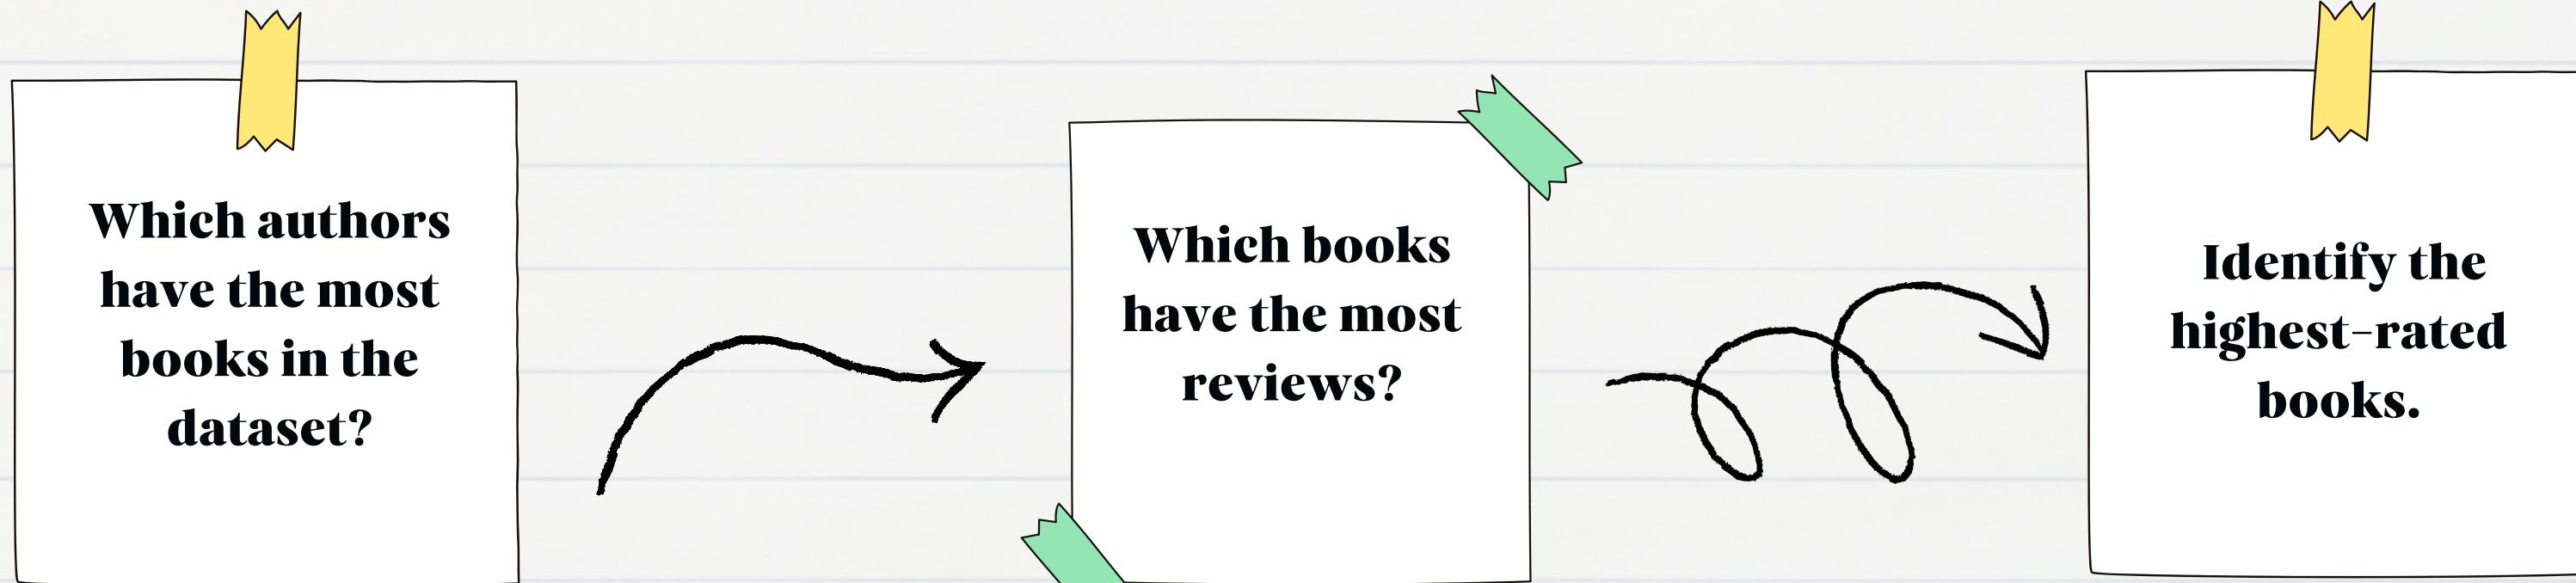

Problem Statement

The dataset has information about many books, like names, authors, ratings, reviews, and more, from the year 1900 to 2020. But we don't know what makes a book popular or well-liked by readers. This makes it hard to understand which books will do well based on their details

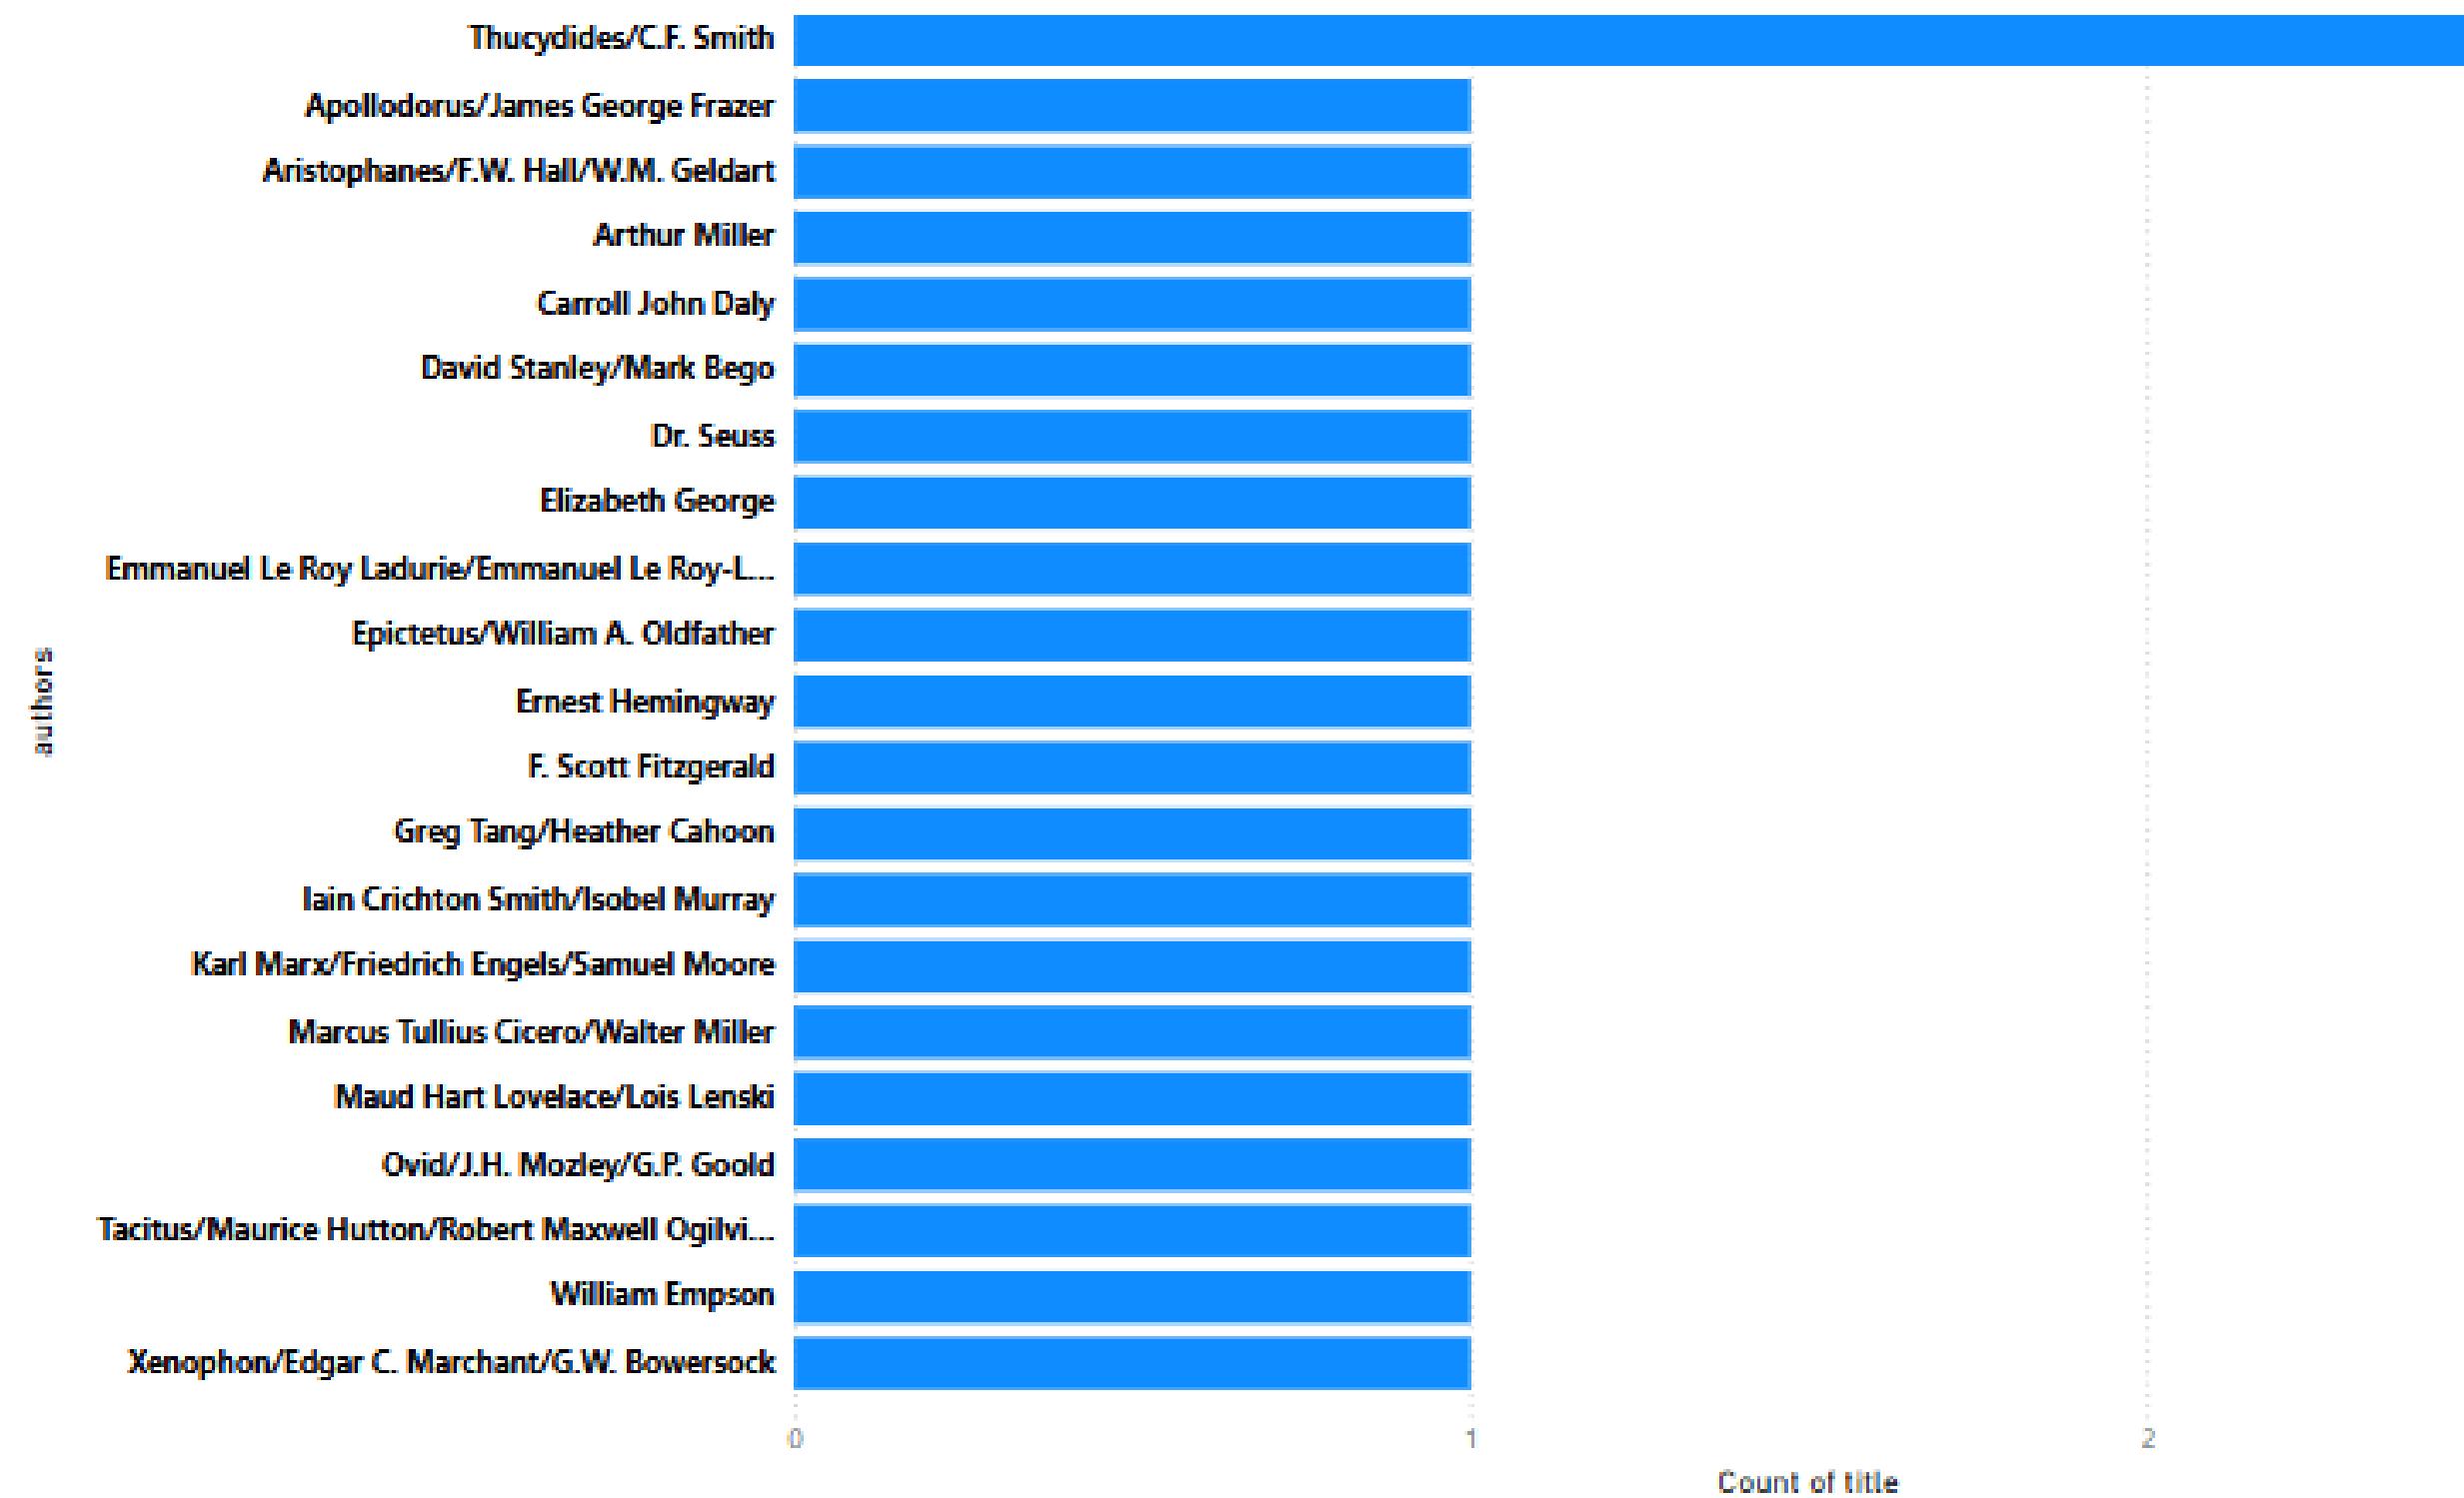

Aim

To understand what features make a book popular on Goodreads using book data from 1900 to 2020.

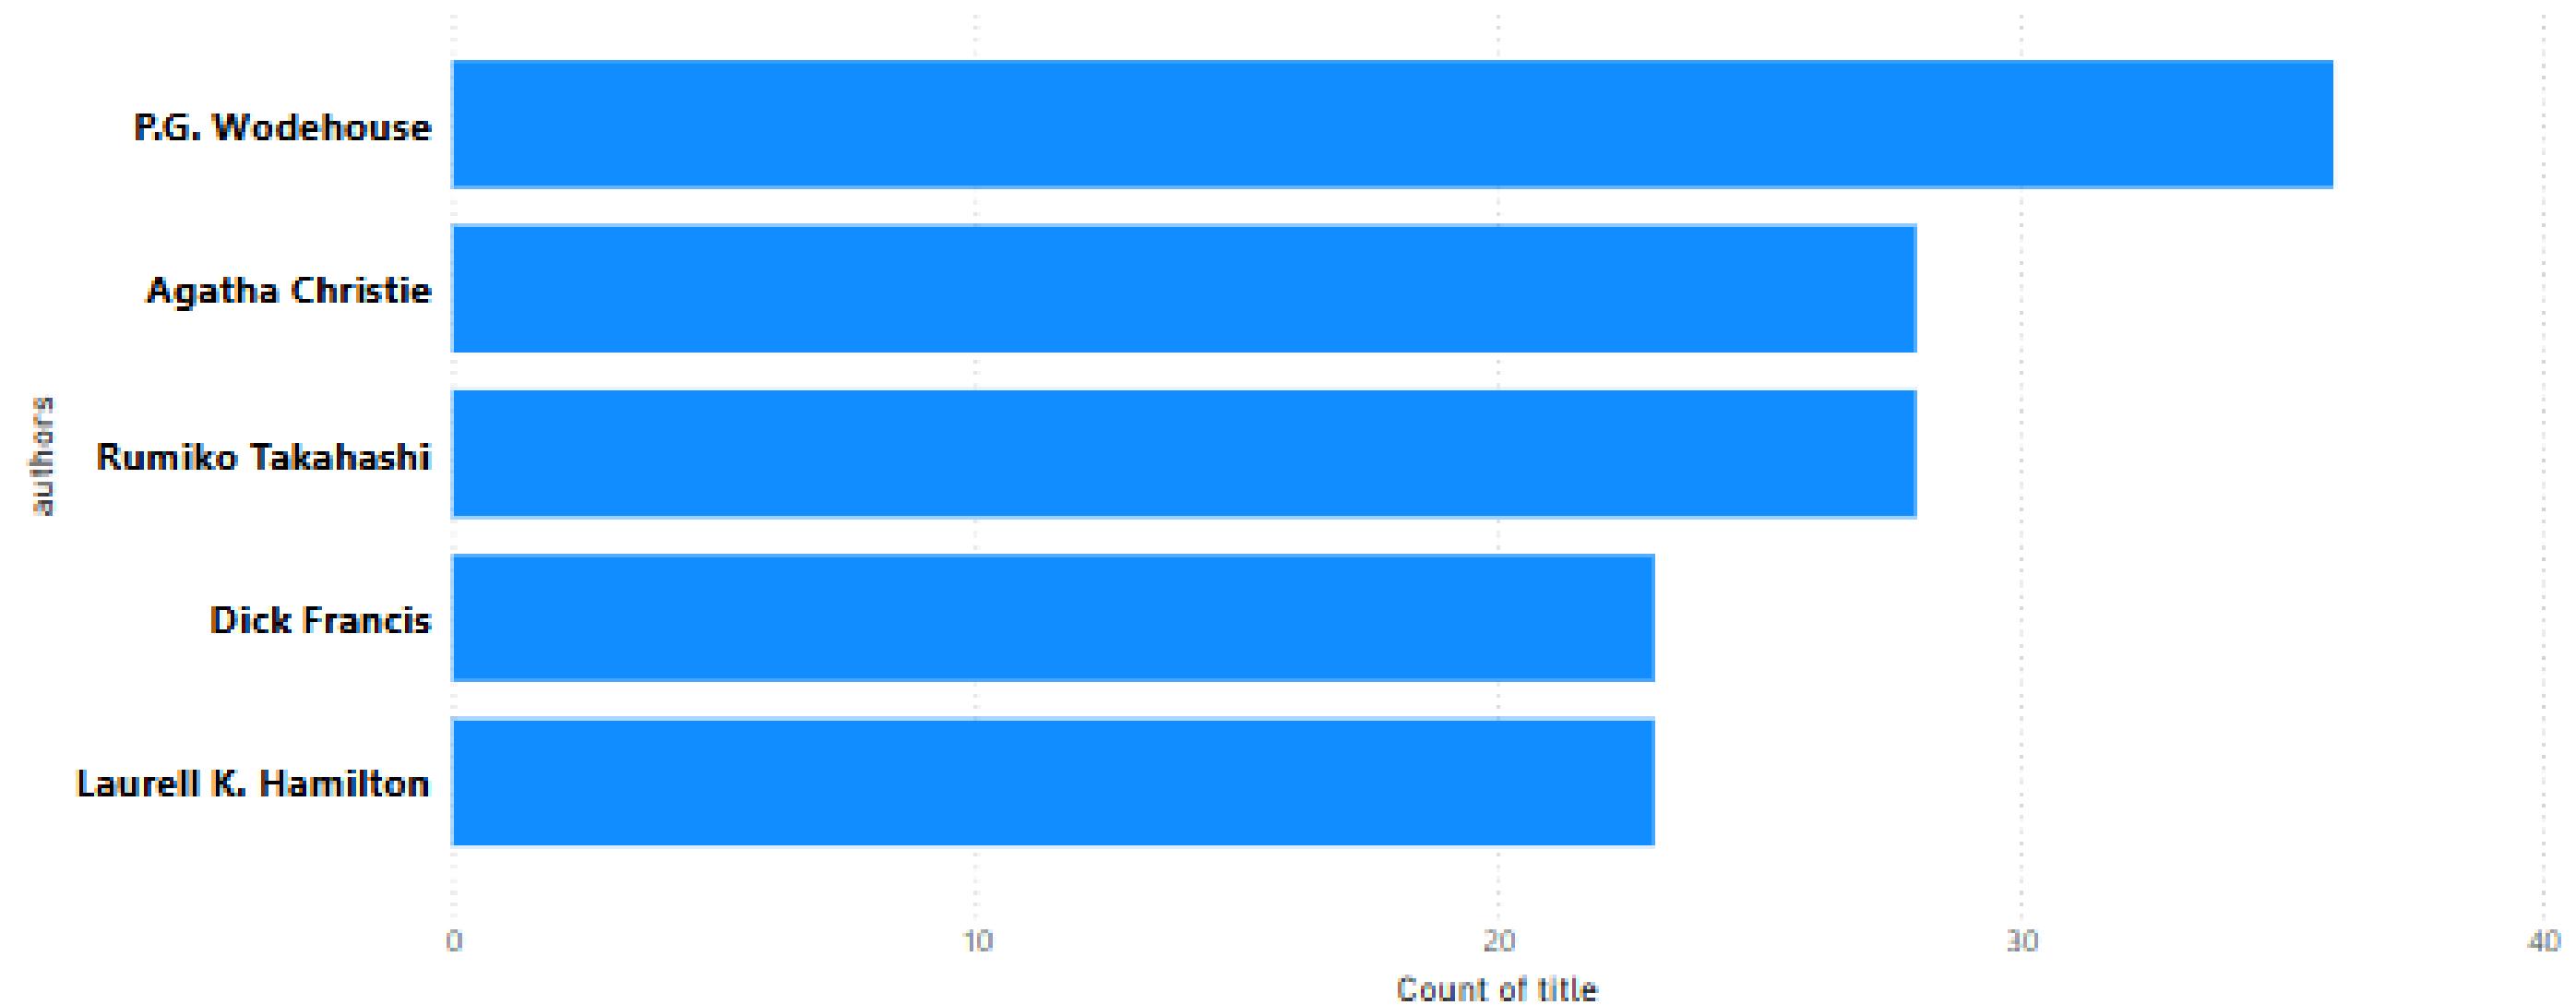

Goals

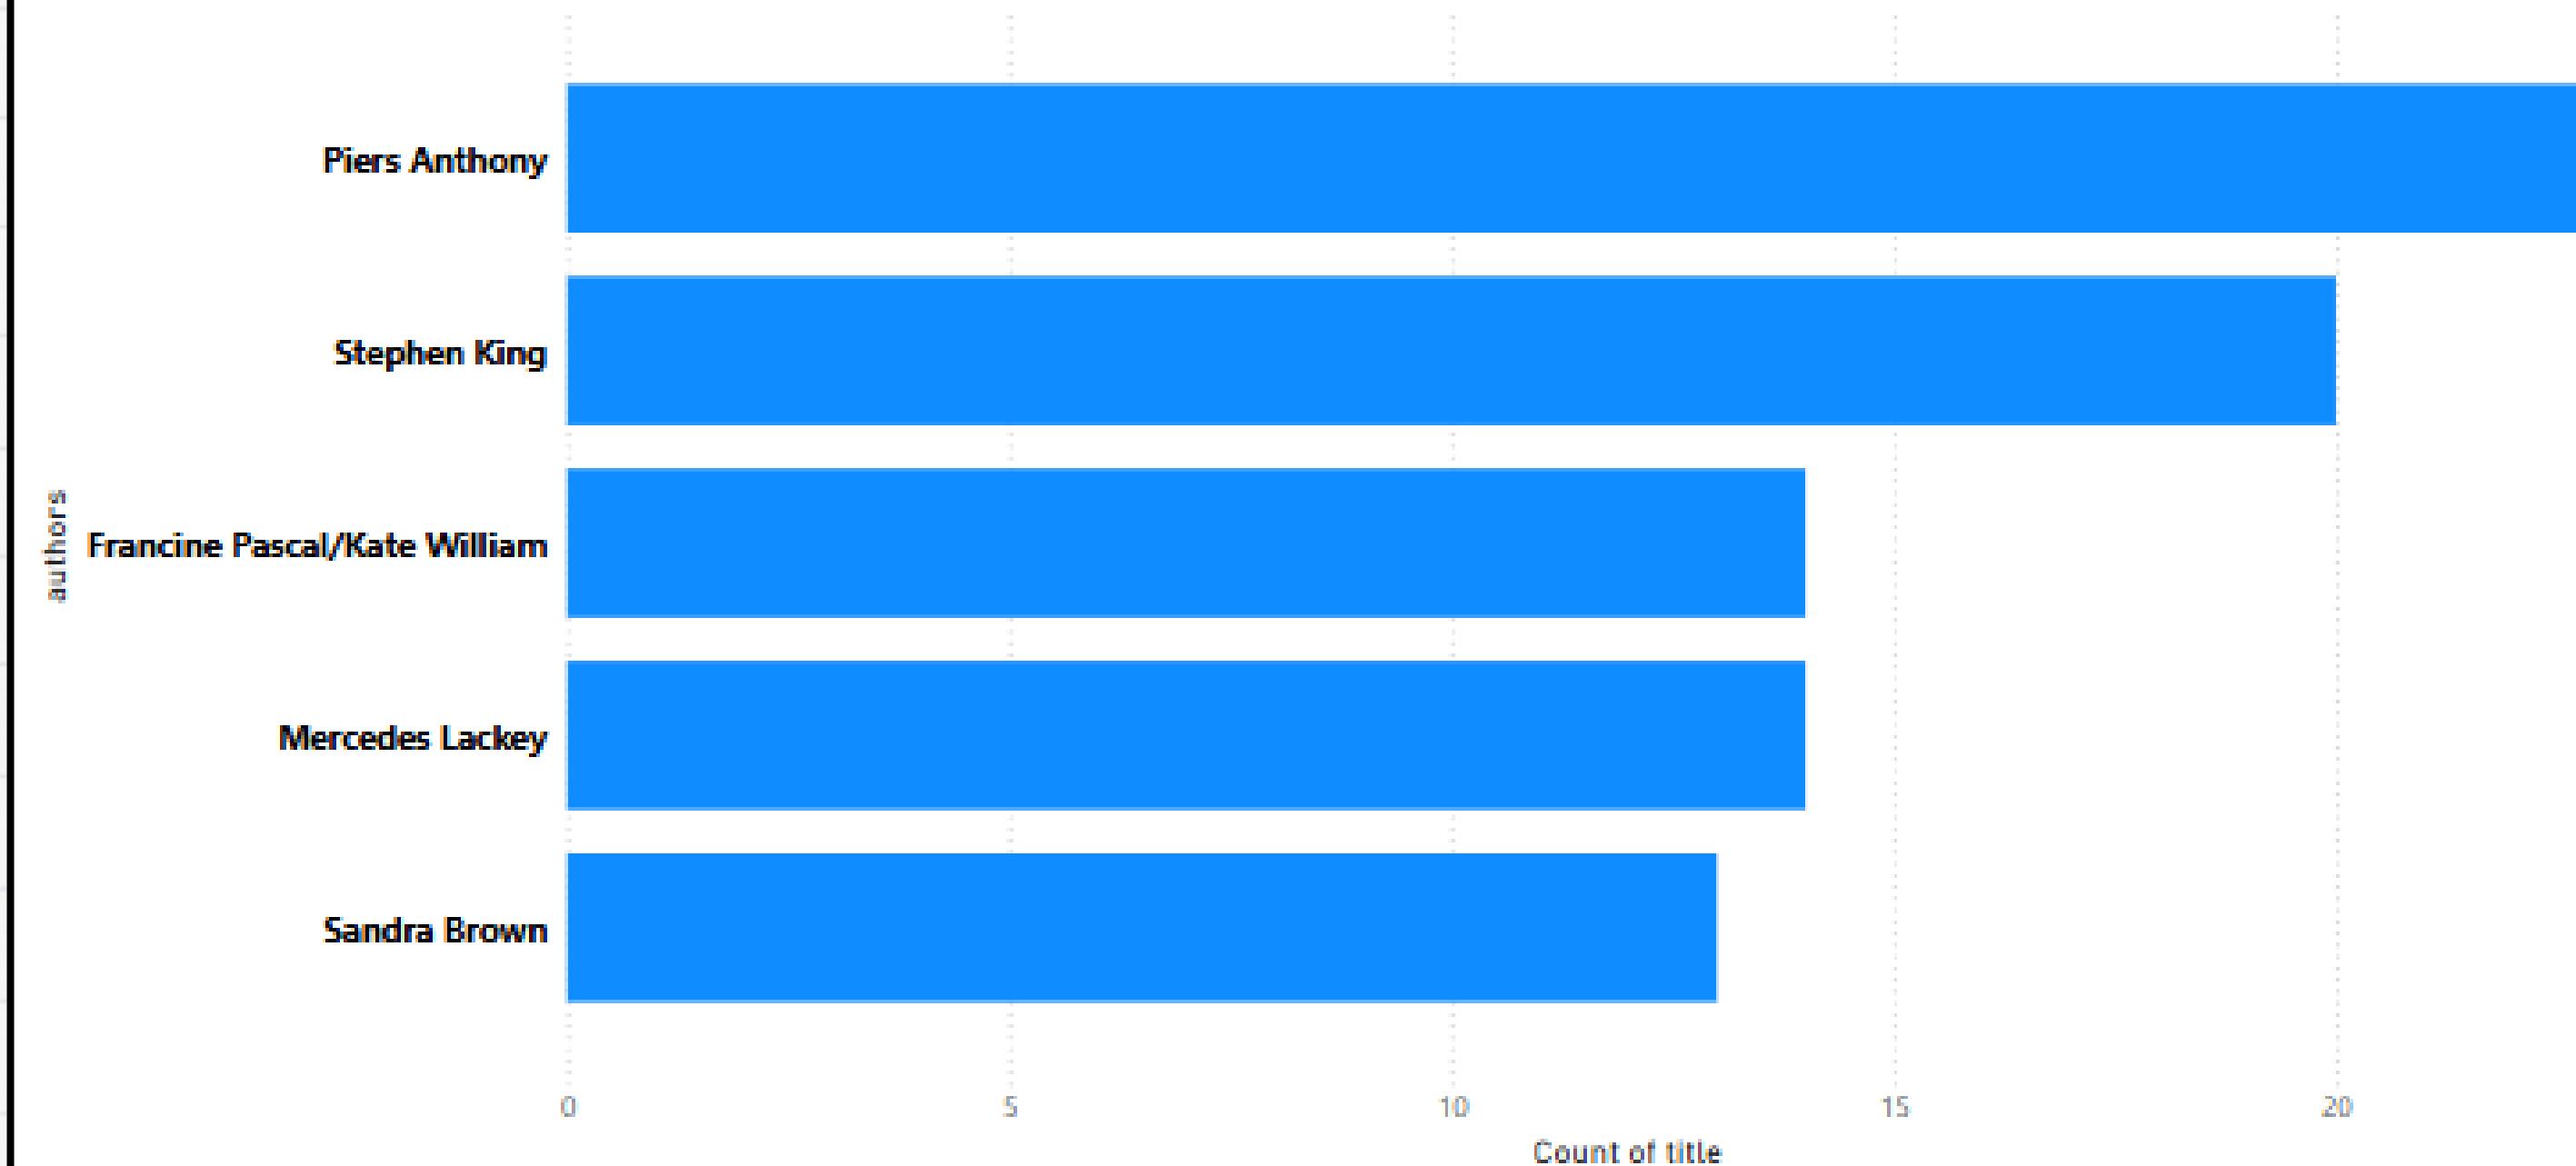

Which authors have the most books in the dataset (1900 - 1950)

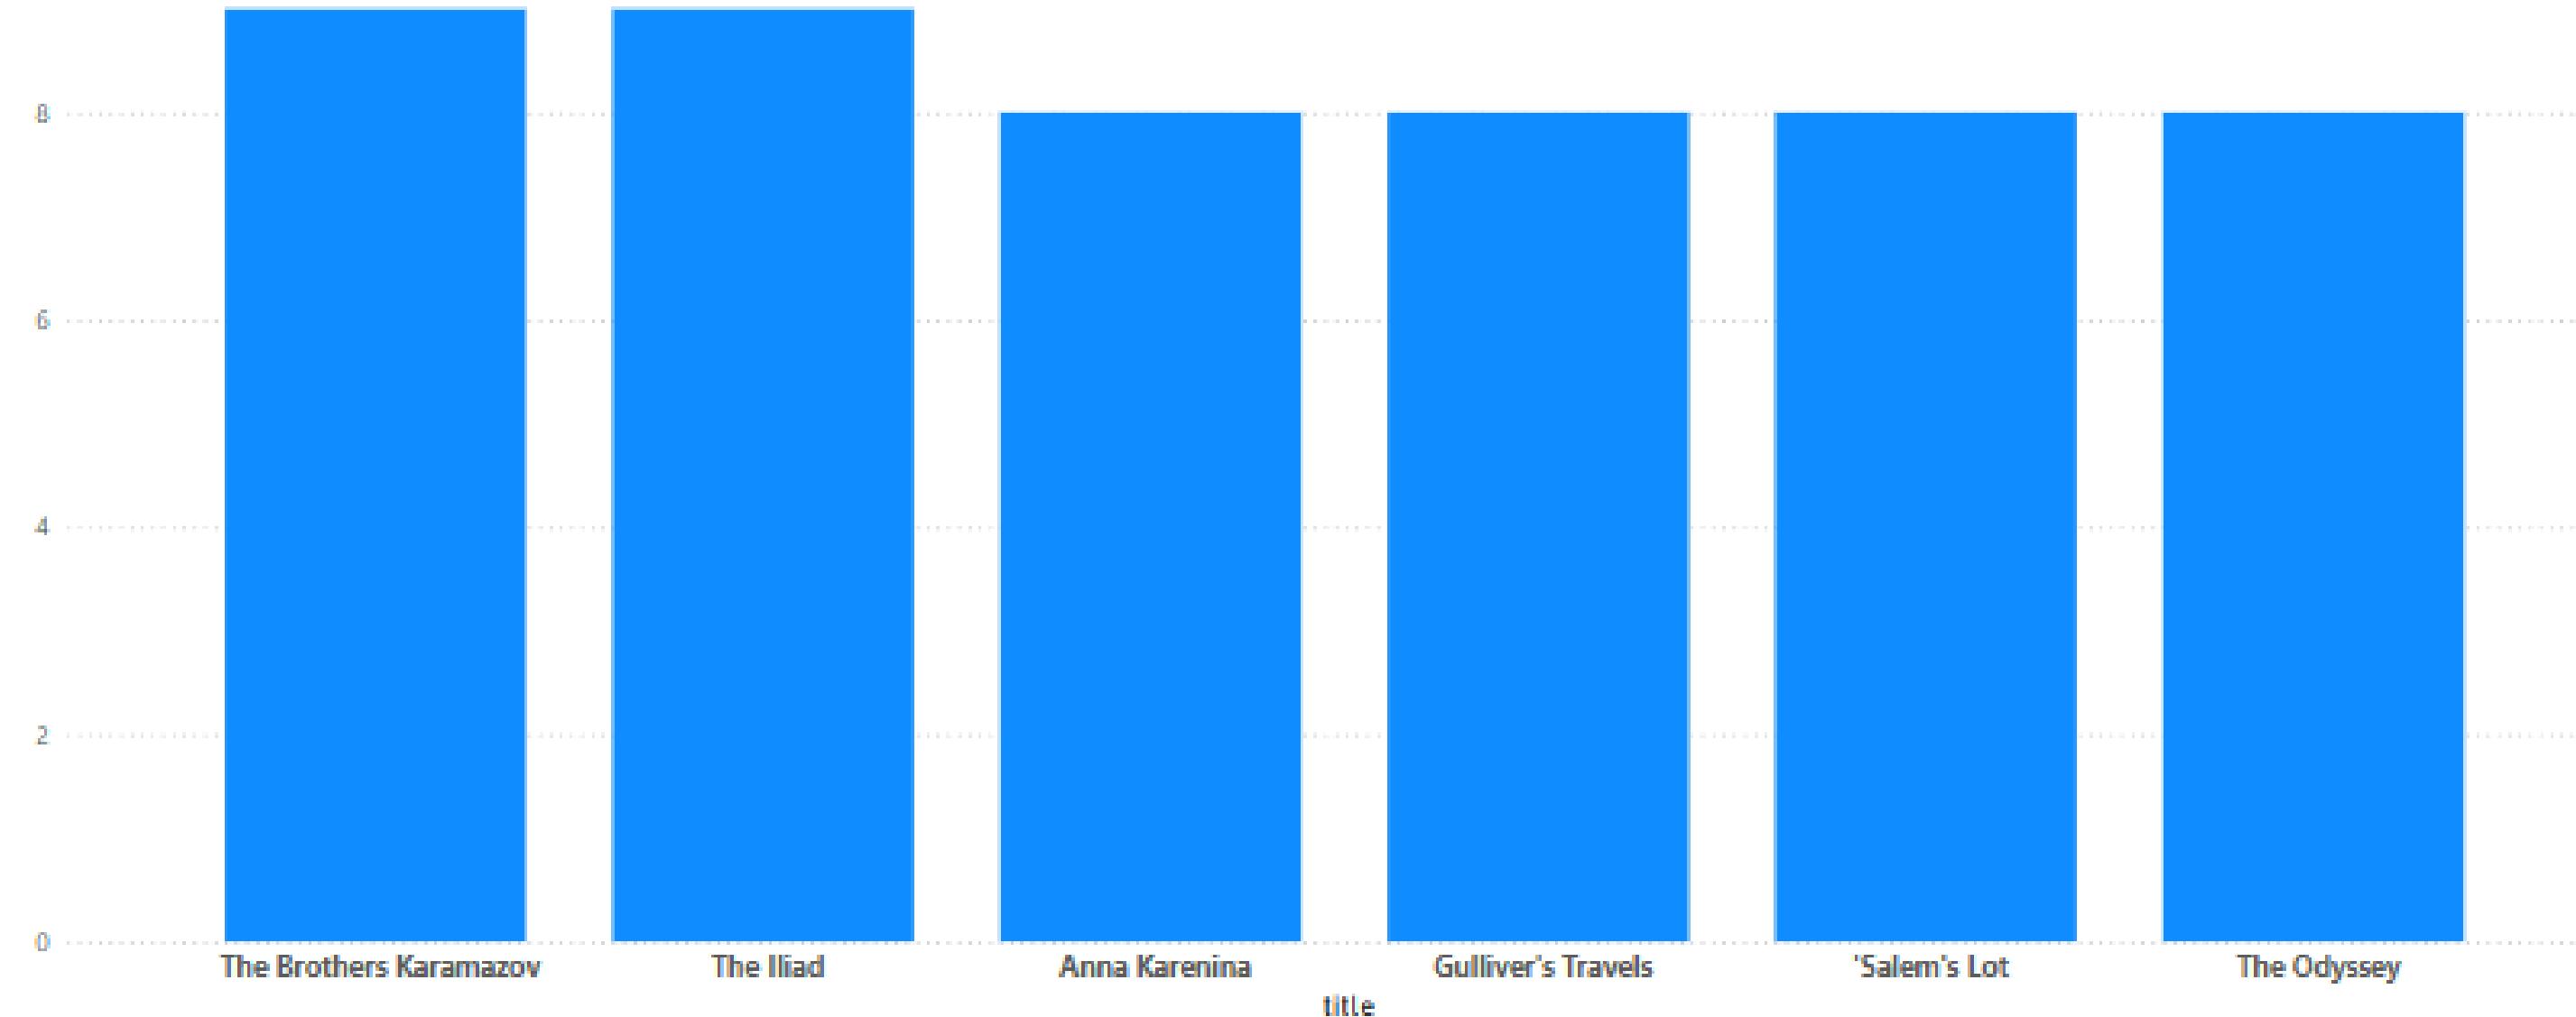

Which authors have the most books in the dataset (1900 - 1950)

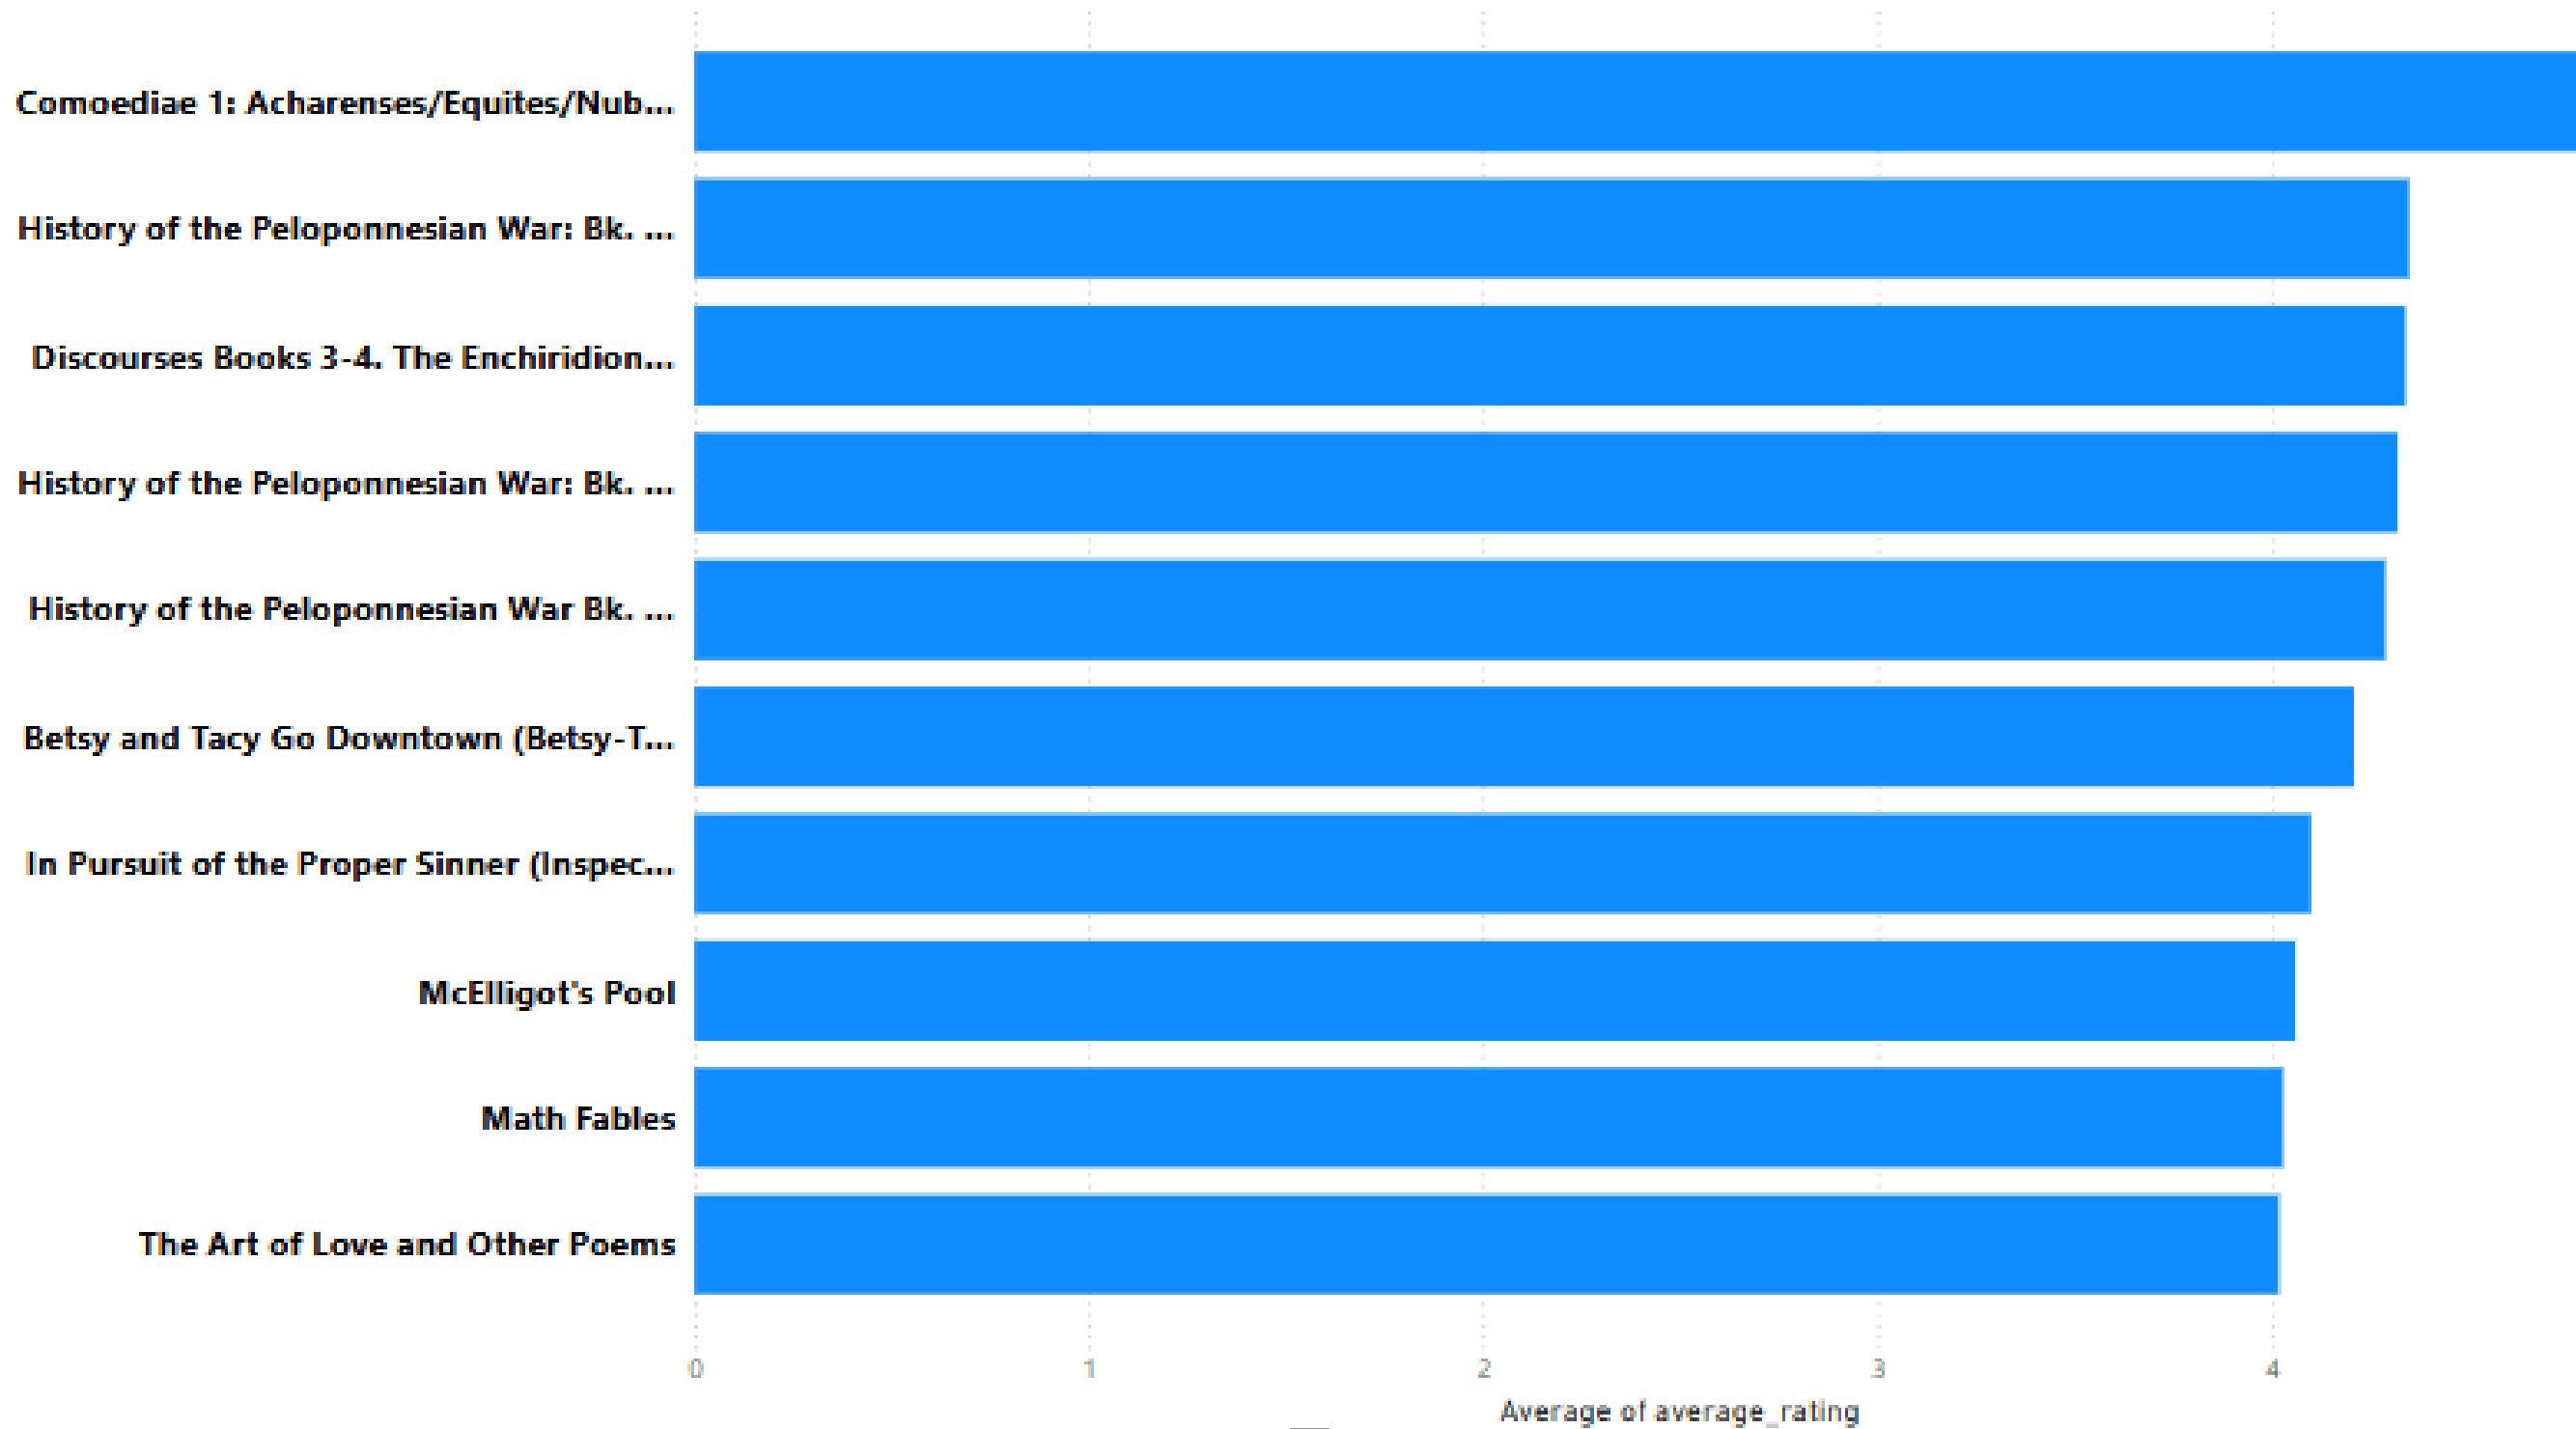

Which authors have the most books in the dataset (1900 - 1950)

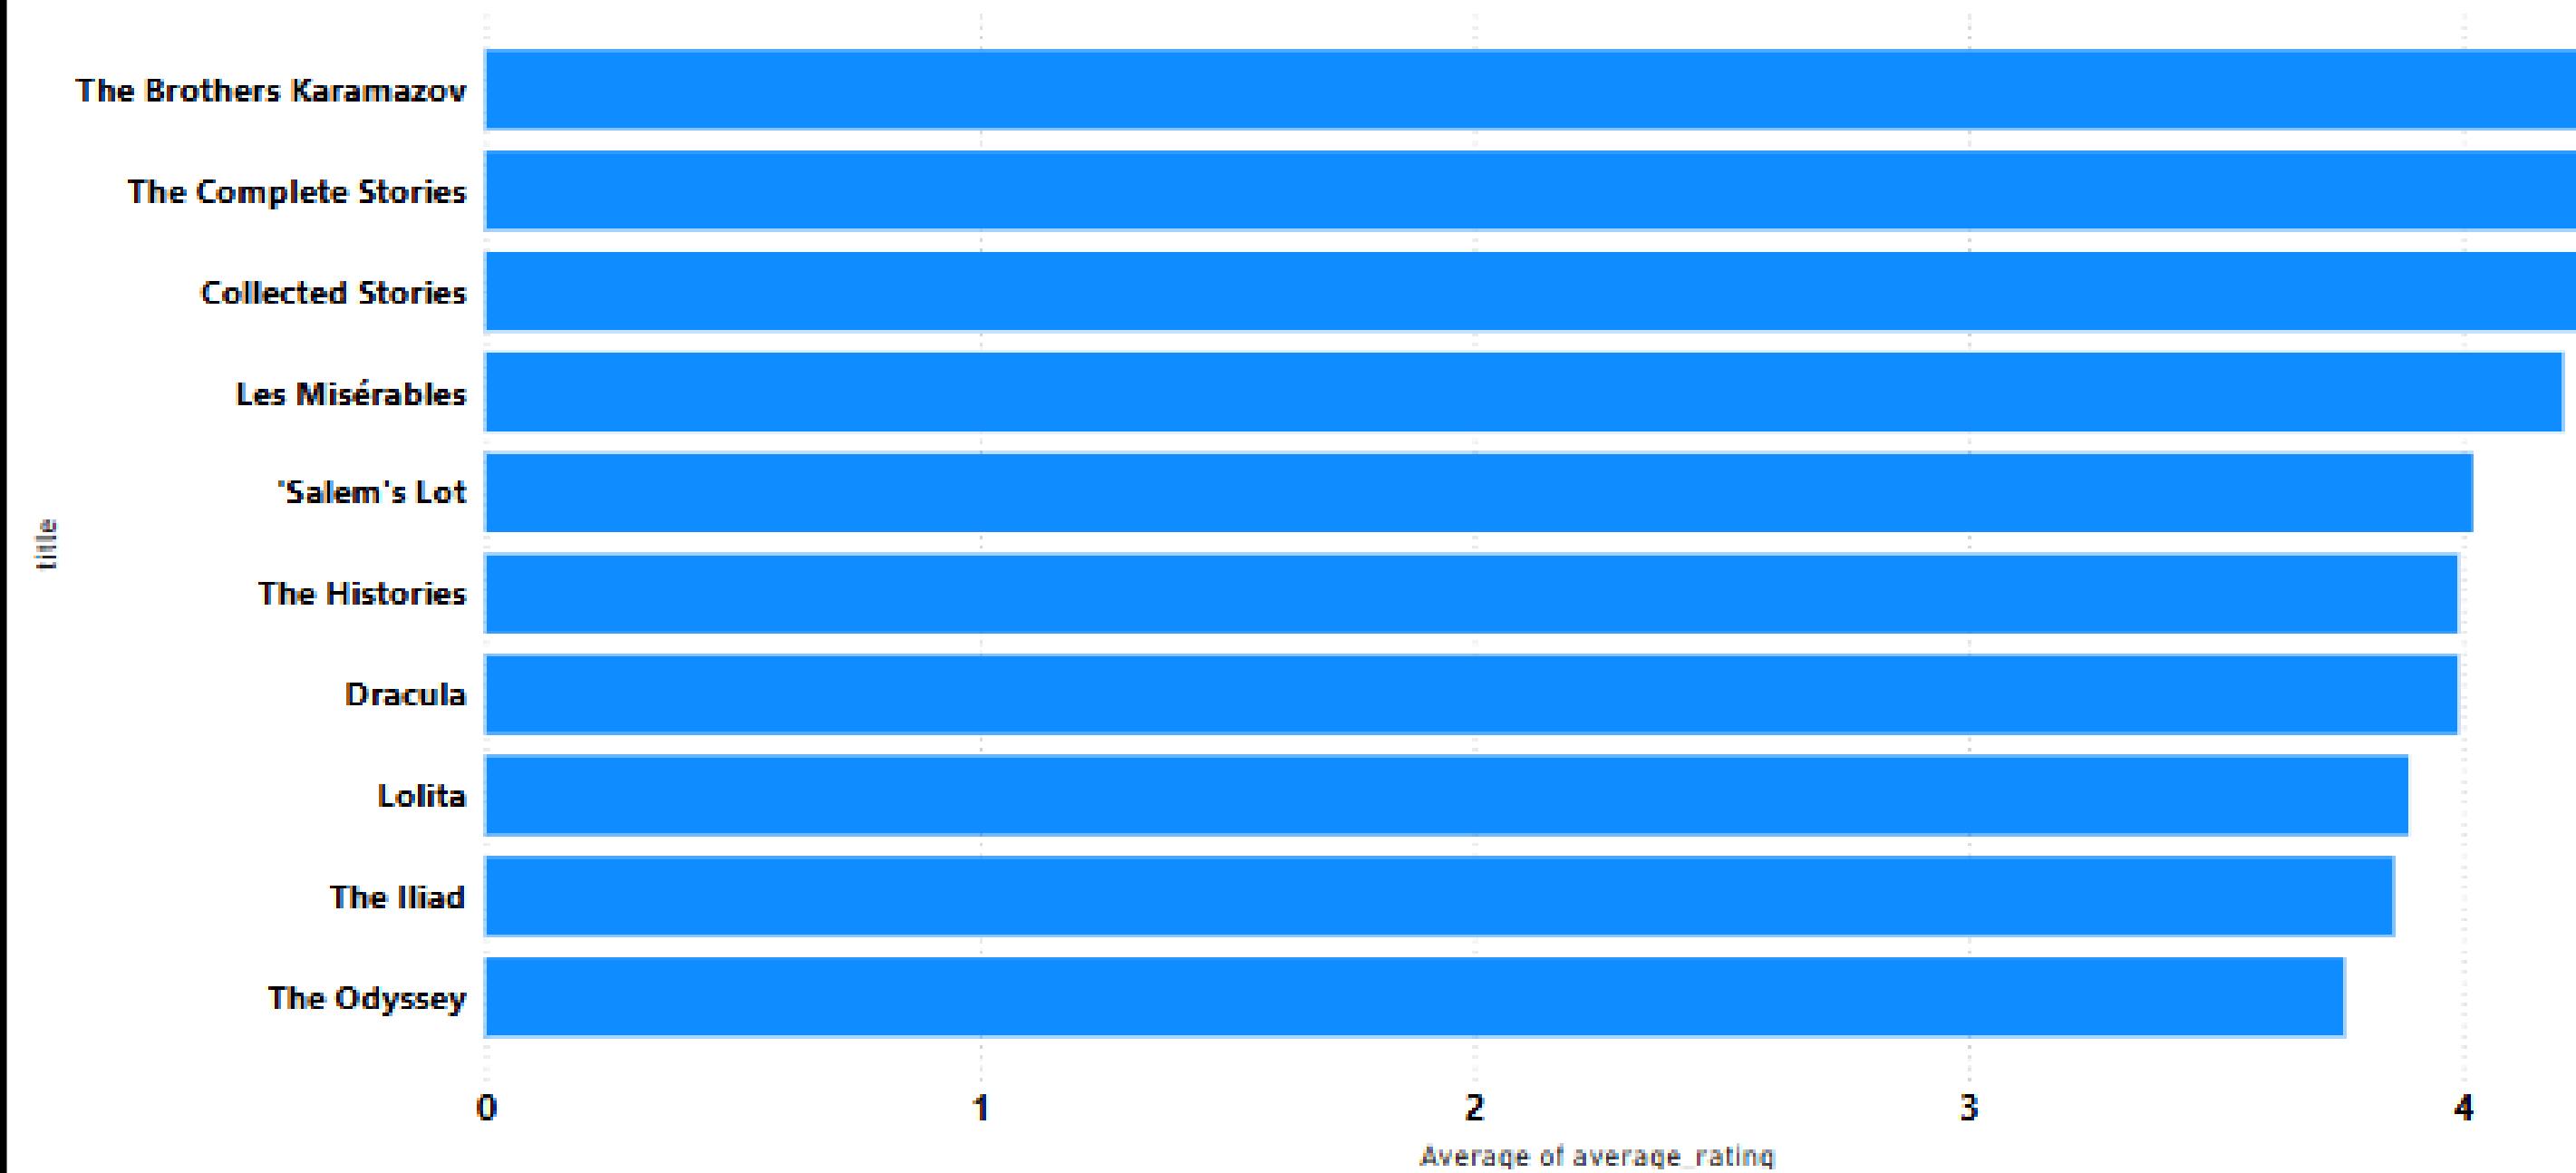

Which books have the most reviews

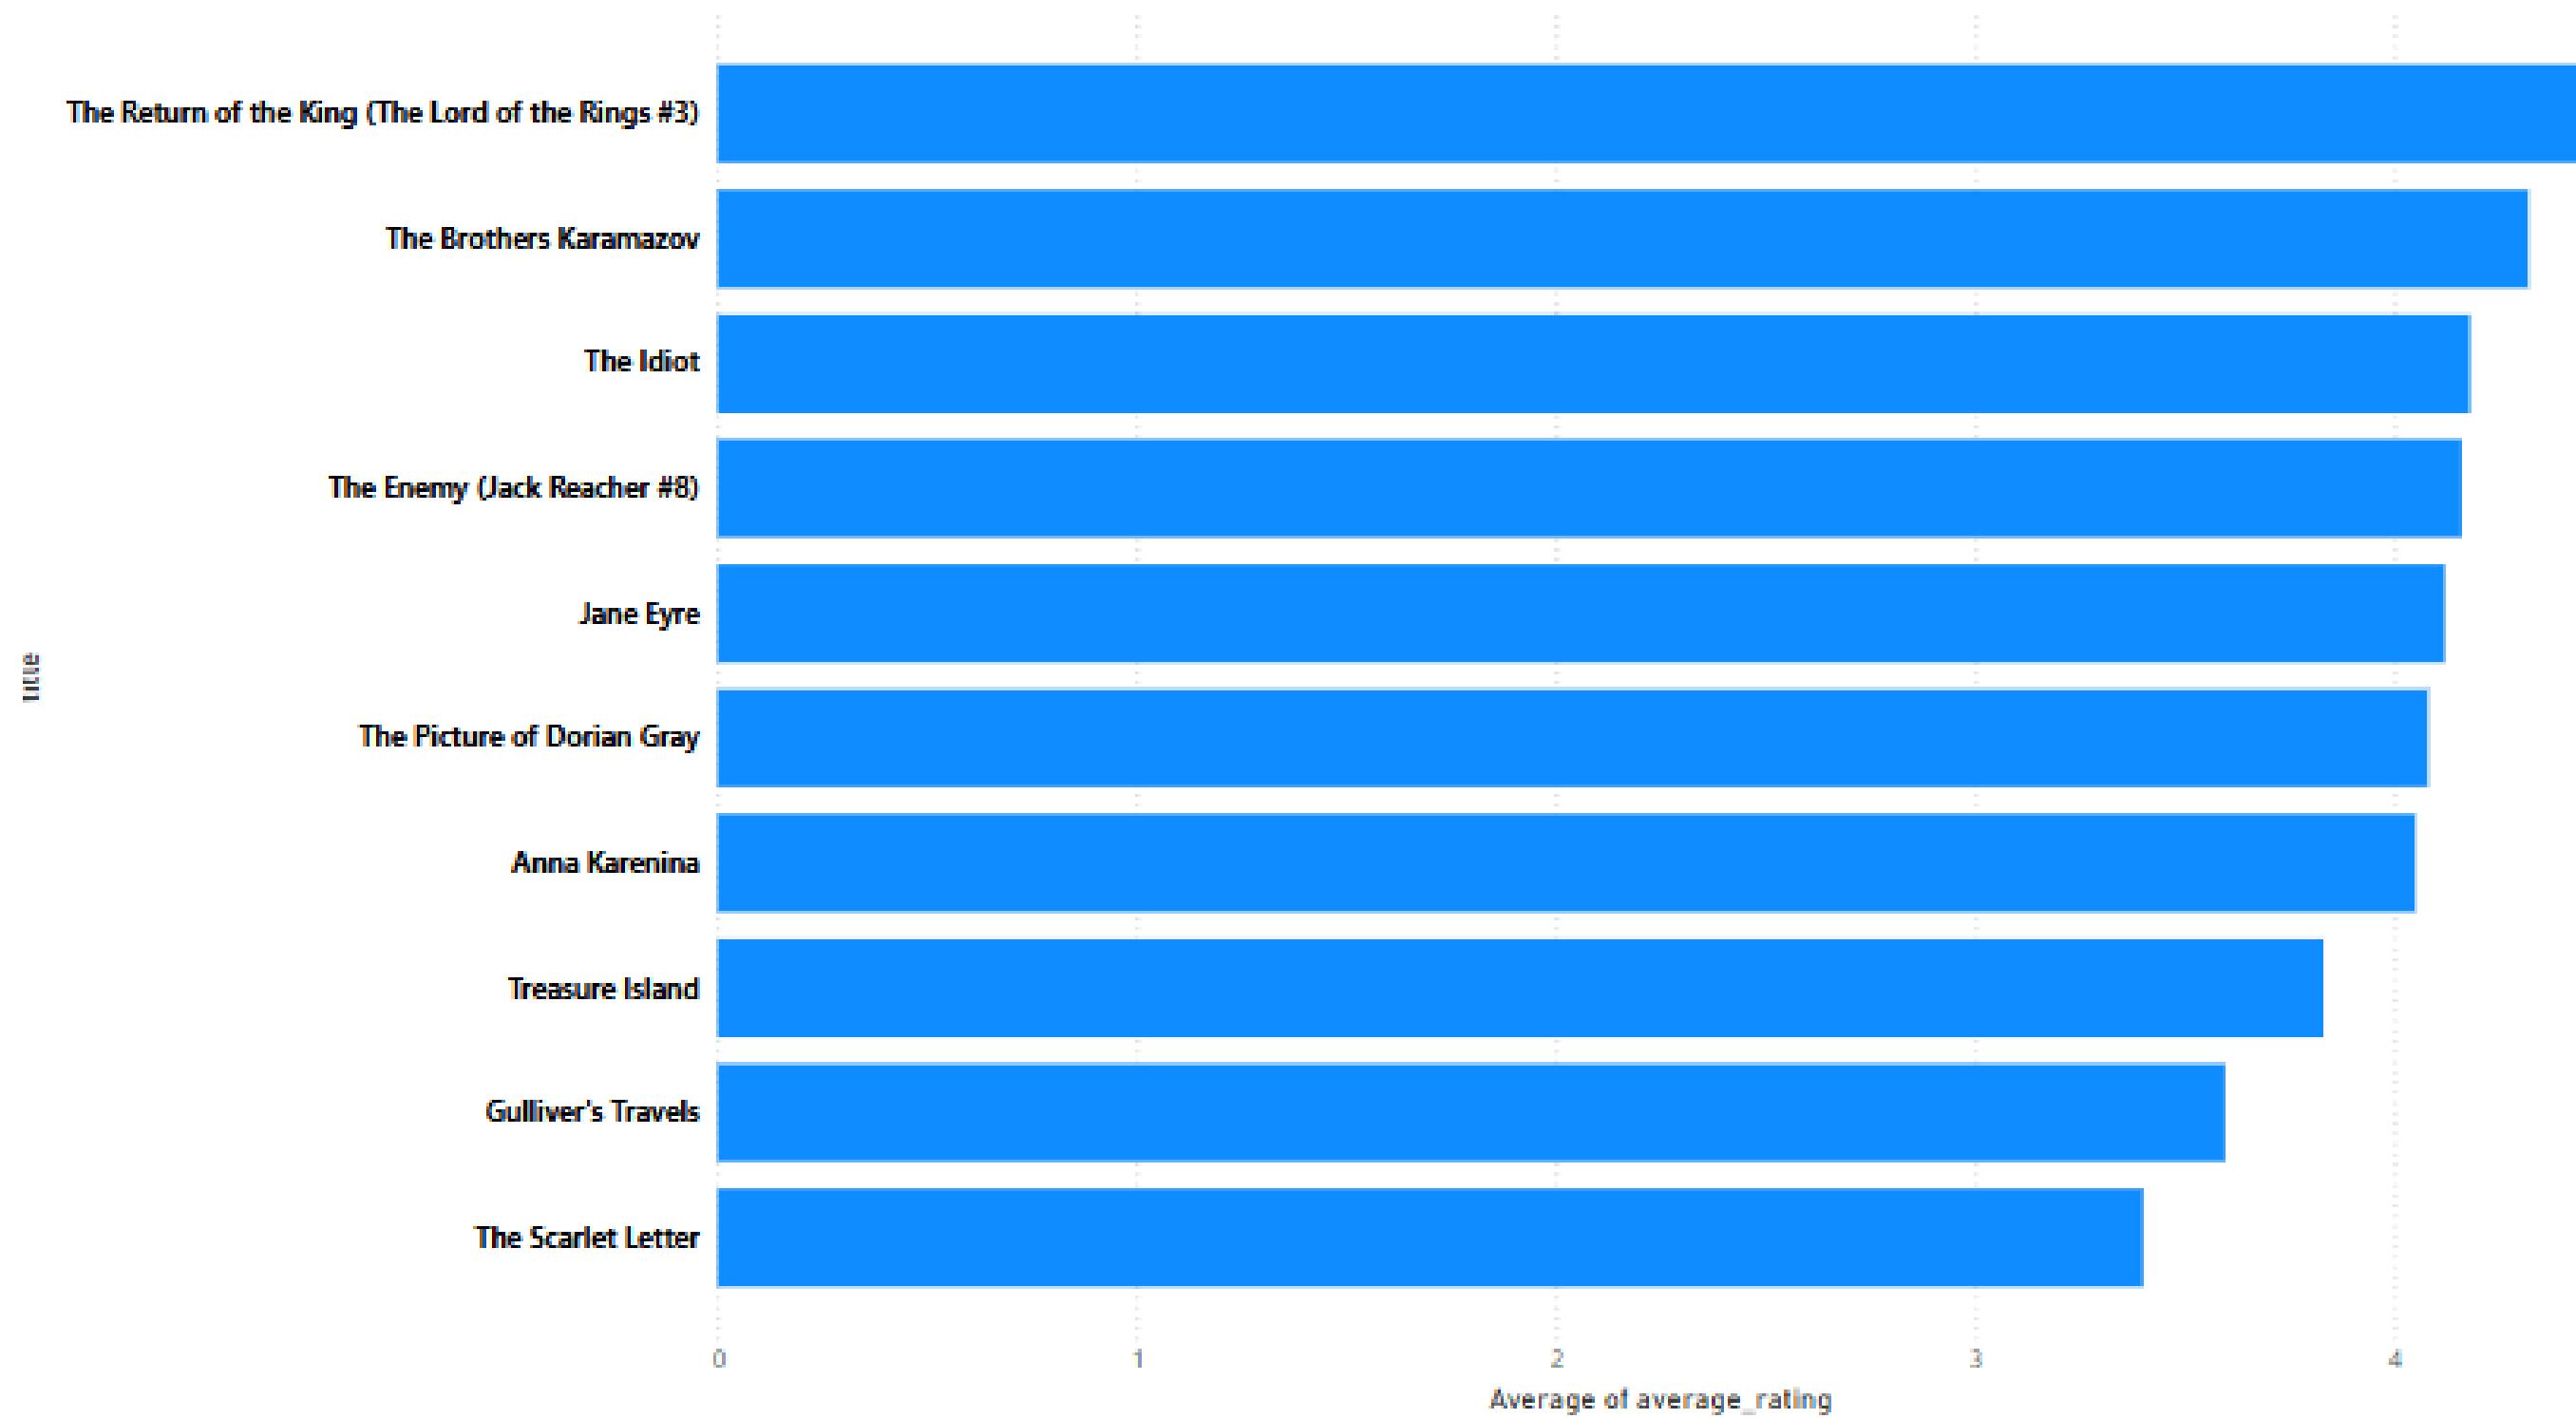

The highest-rated books (1900 – 1950)

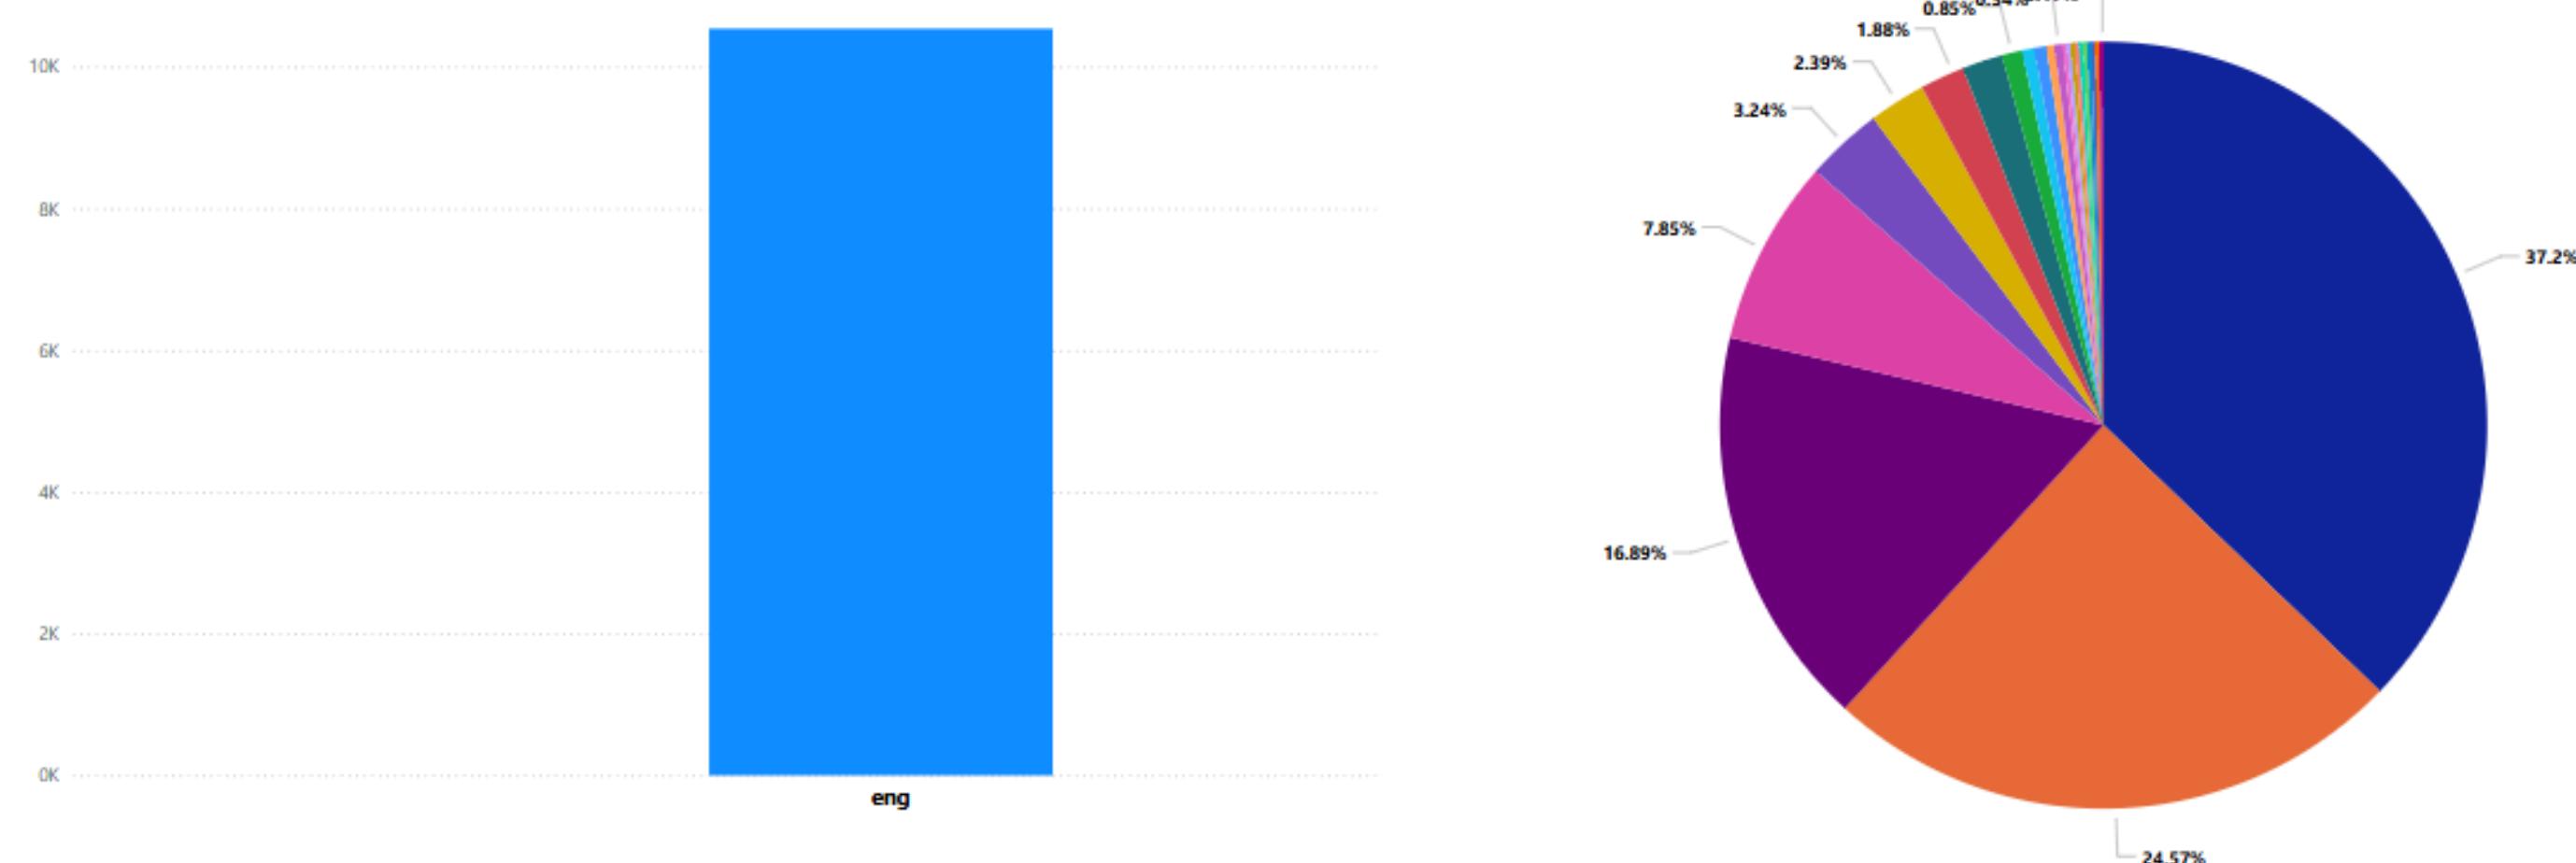

The highest-rated books (1950 - 2000)

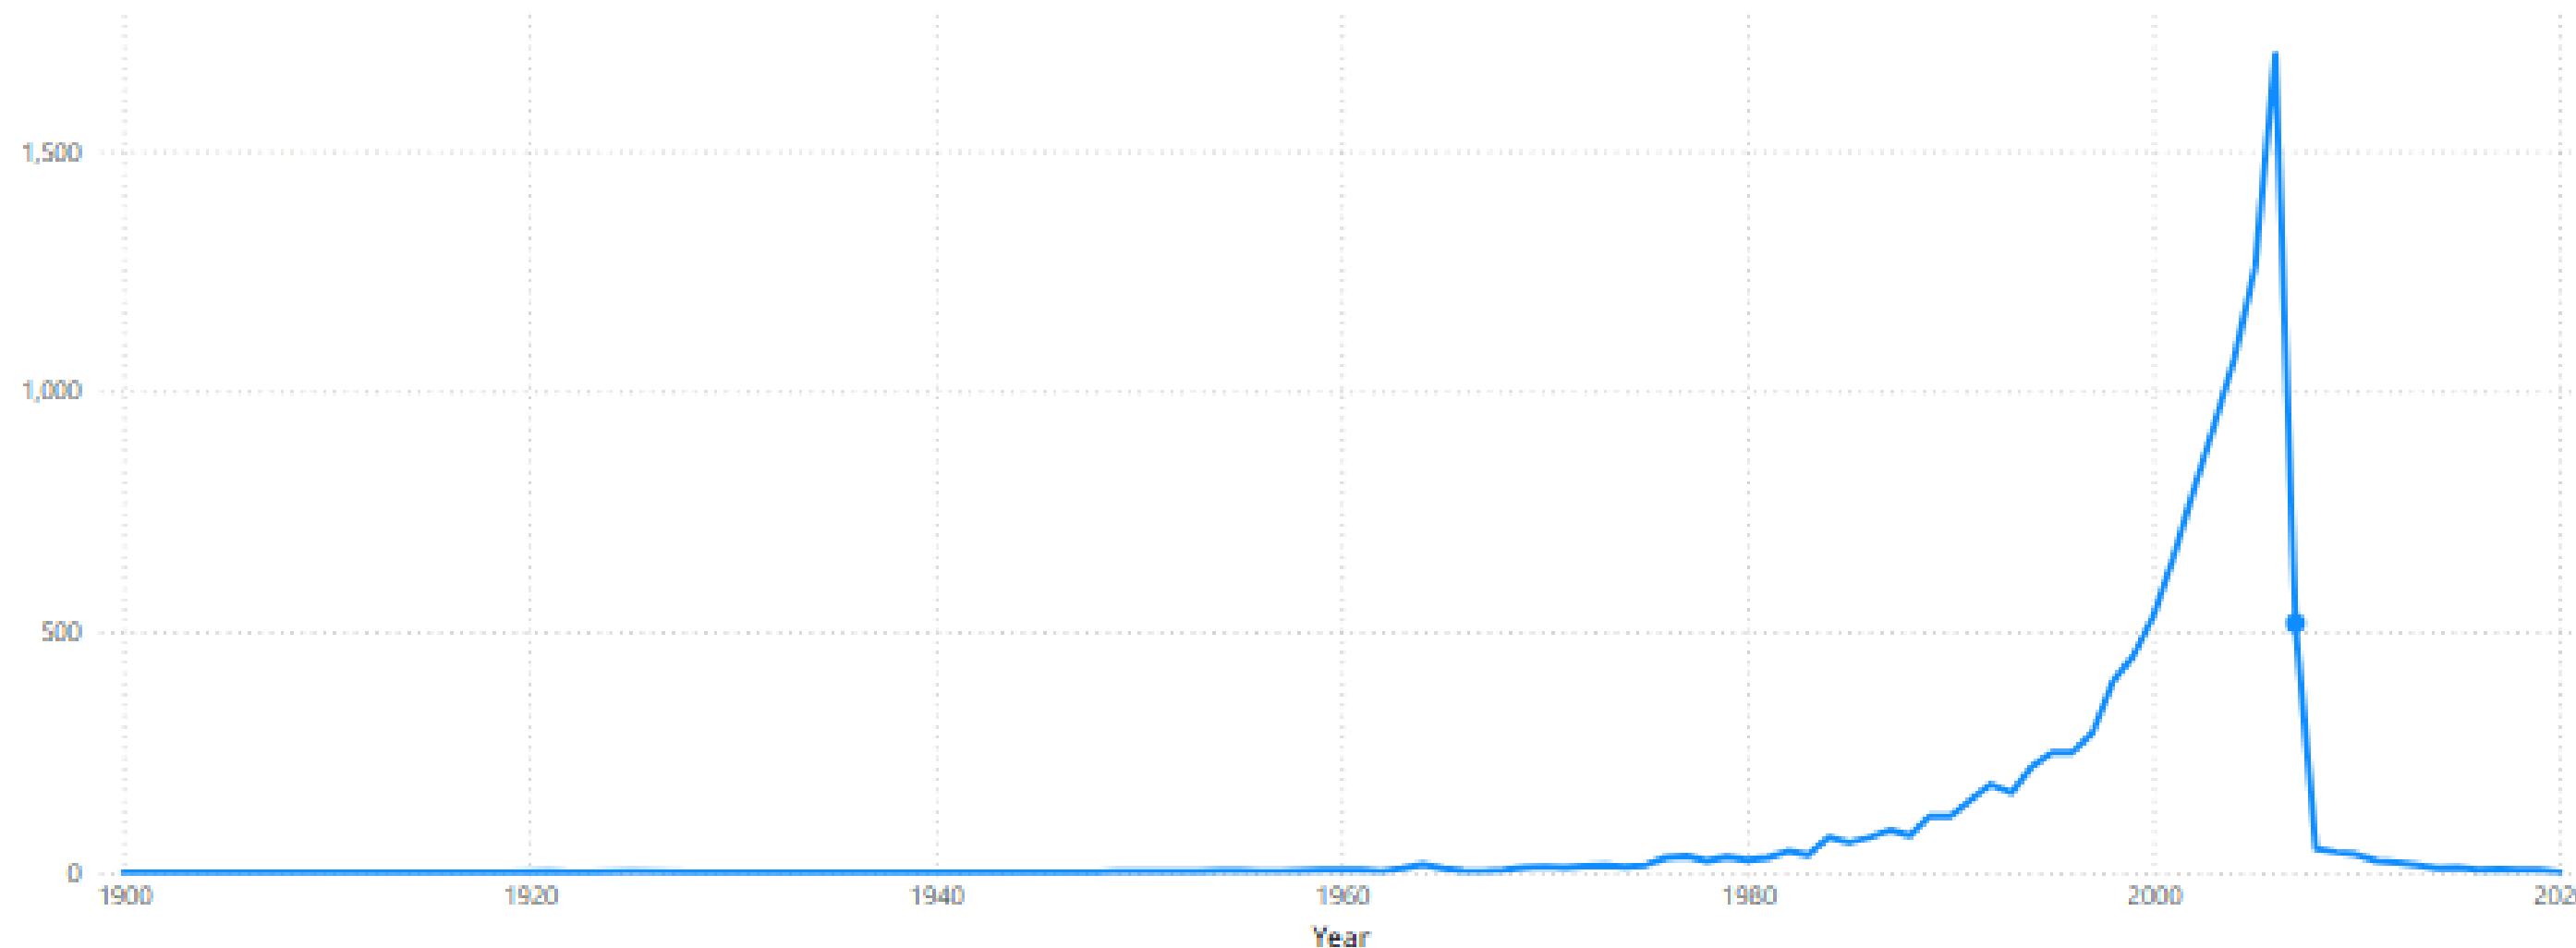

The highest-rated books (2000- 2020)

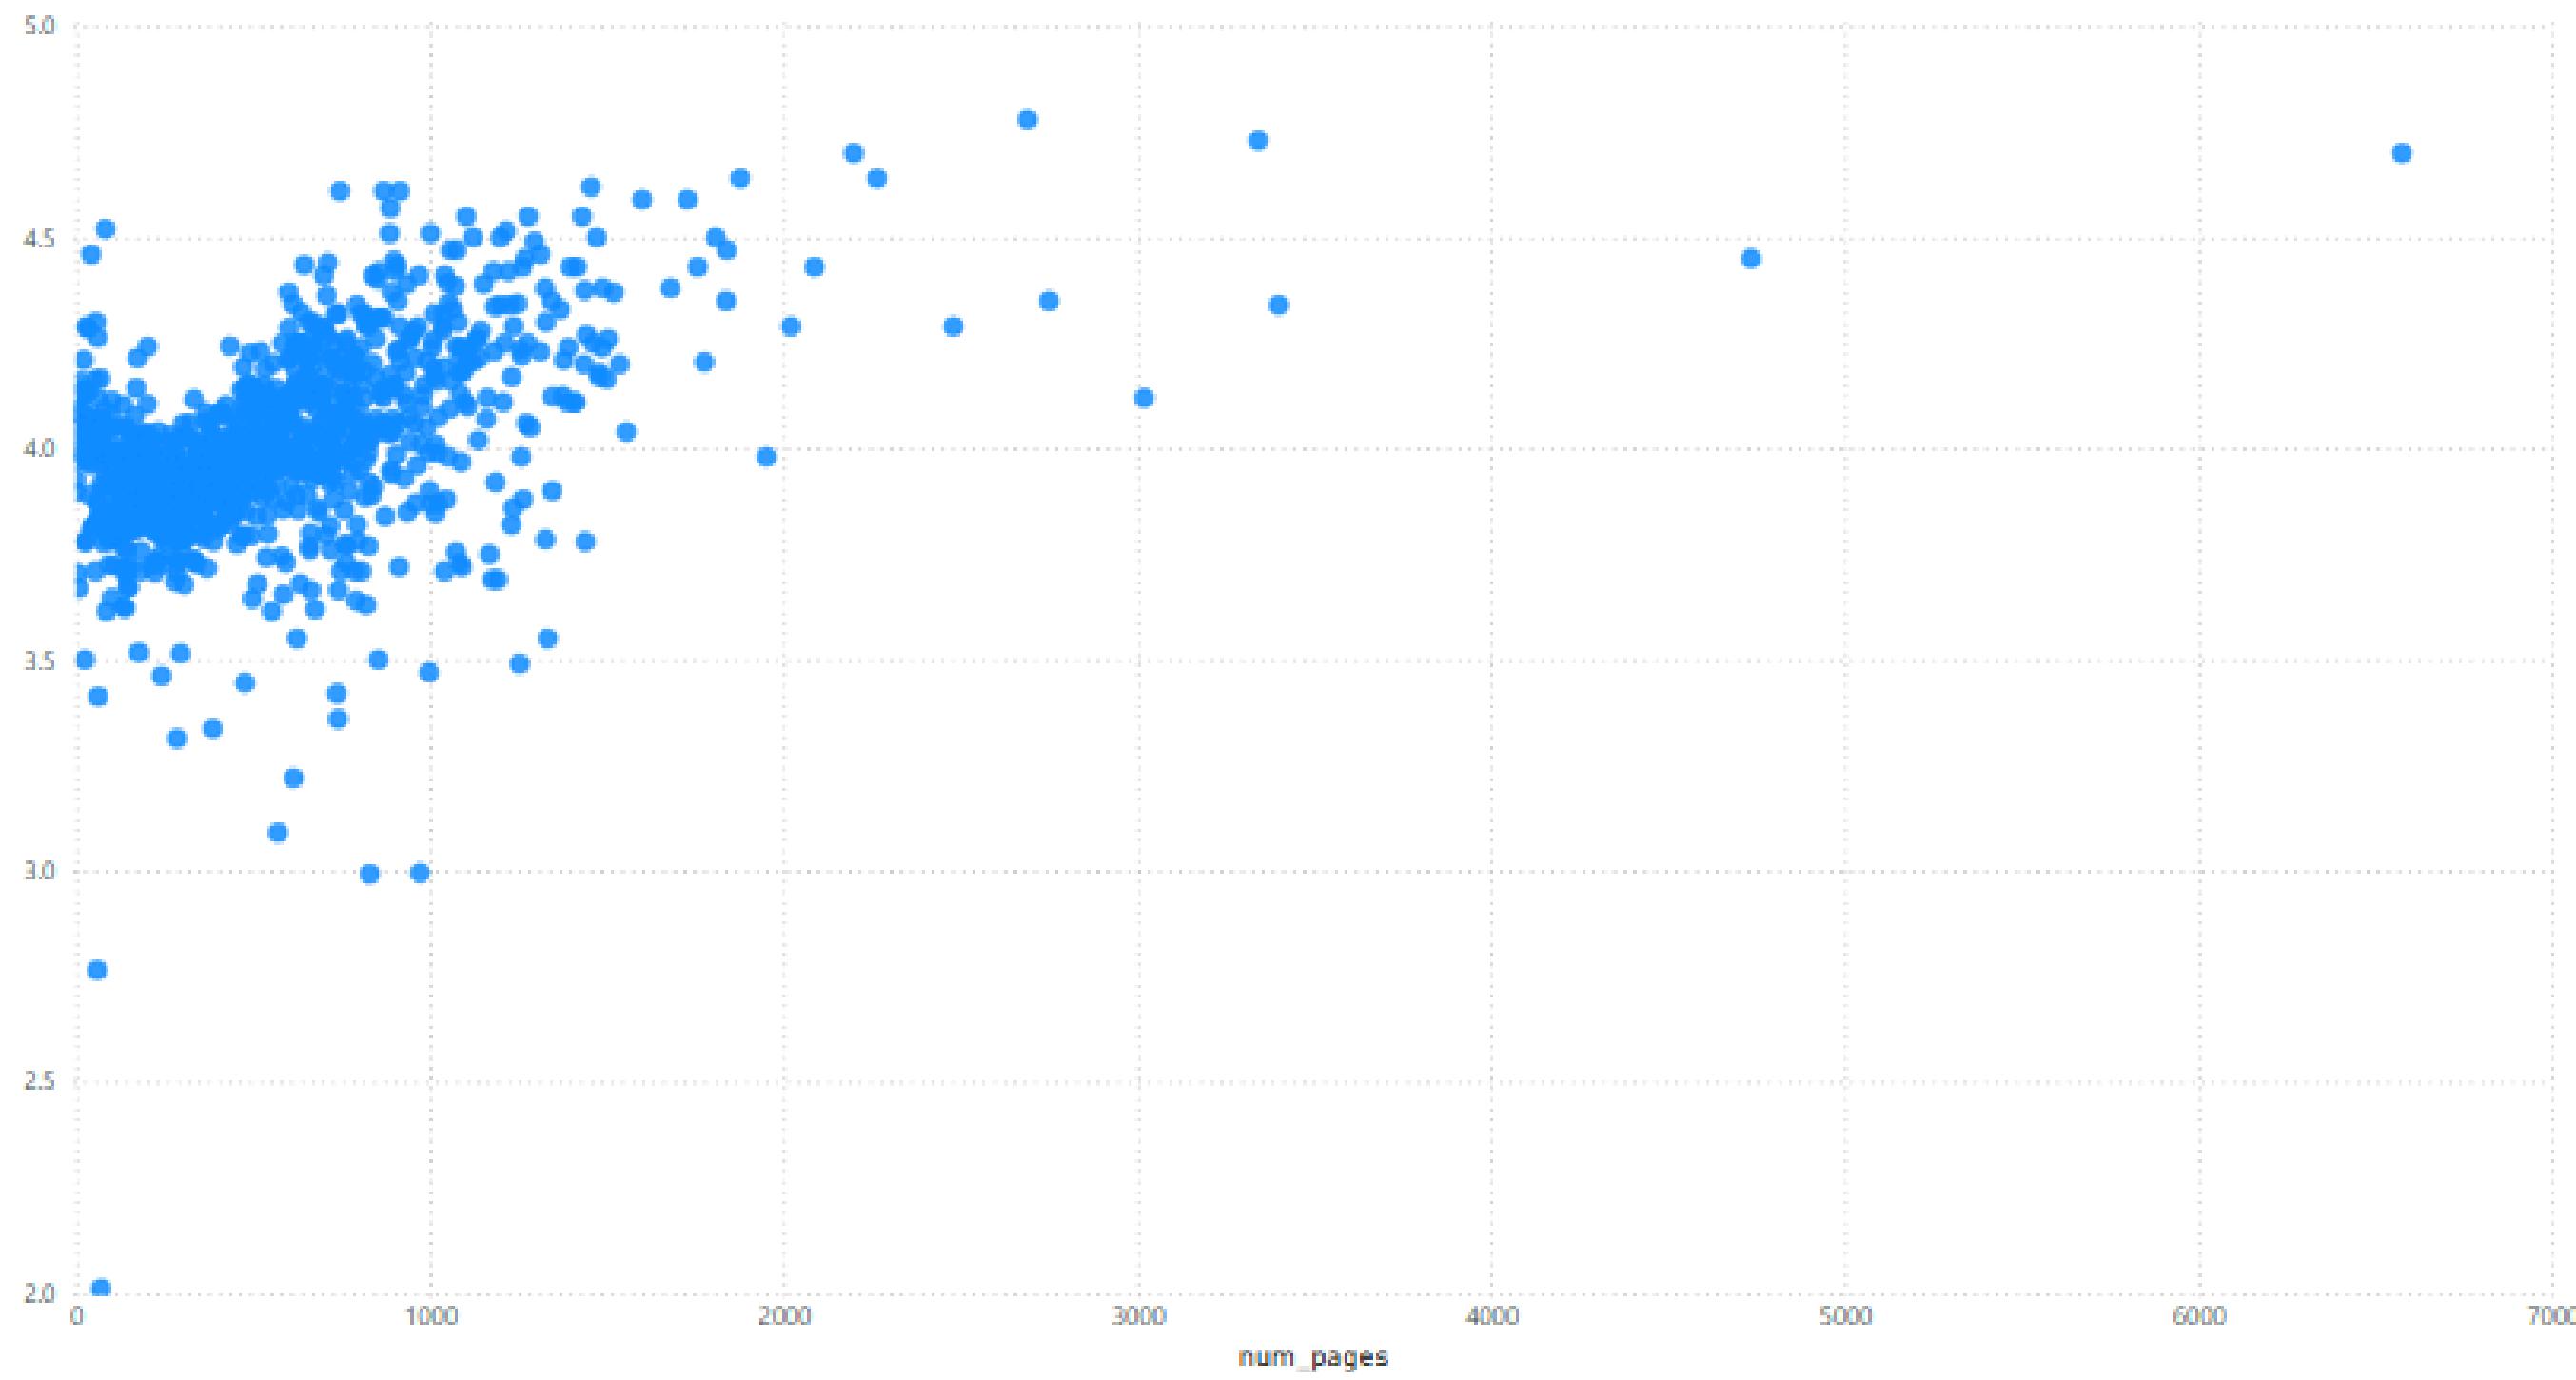

Which languages dominate the collection

Trends in publishing have the publishing volume changed over the years

Do longer books get better ratings

Recommendation

From the data, I found that books with more reviews get more attention, English books reach more readers, and longer stories often get better ratings. Publishing at the right time and learning from successful authors can also make a big difference.

Thankyou
